Flexible Thinking

Dear _____,

Today in class, we learned that **flexible thinking**, sometimes also called divergent or elastic thinking, includes thinking quickly and adapting to new situations. It also means being able to use logic, reasoning, and imagination to come up with new ideas in new situations. This kind of thinking can help you devise unconventional solutions to conventional problems.

Please encourage your student to share what thinking outside of the box means and how it could be used to solve problems at home or in the community. Ask them to share the problem they worked on in class.

Please do not hesitate to reach out with any questions or concerns.

Best,
